Aditya Group CRM

Client Feature Overview

A simple guide to managing leads, teams and customer follow-ups.

What the CRM helps your team do

The Aditya Group CRM brings the complete lead journey into one secure workspace. It helps teams capture enquiries, assign responsibility, follow up on time and understand performance without relying on spreadsheets or scattered messages.

Key business features

- **Secure OTP login** - Users sign in with a one-time code sent to their registered email. No shared passwords are required.
- **Lead capture and tracking** - Store customer details, source, dealer, vehicle interest, enquiry type, priority, remarks and follow-up dates in one record.
- **Smart assignment** - Assign leads to the right dealer, department and team member. The system validates the selected dealer, brand, model and enquiry path.
- **Clear lead lifecycle** - Track every lead from new and in progress to follow-up, converted, closed or lost.
- **Department updates** - Sales, Service, Finance, Insurance and other departments can record their relevant work and remarks.
- **Follow-up discipline** - Add remarks, outcomes and next follow-up dates so no customer conversation is missed.
- **Reports and exports** - View lead volume, conversion and workload. Download reports in Excel or PDF when needed.
- **Mobile-ready experience** - Use the responsive portal on desktop or mobile. The notification centre keeps users informed about relevant lead activity.

User roles and access

Each person sees only the work and actions relevant to their responsibility. This keeps the process simple and protects customer information.

Administrator

Controls day-to-day CRM operations across the business.

Manage users and master data, review dashboards and reports, manage leads, assignments and recycle-bin records.

Data Operator 1

Works across the organisation, or can be limited to an assigned dealer.

Create and update leads, manage follow-ups and assignments, and work with the lead pipeline.

Data Operator 2

Works within an assigned dealer and focuses on leads they create.

Create leads, update their own lead records and continue follow-ups while maintaining dealer-level focus.

Department User

Works only on leads assigned to them in their department.

View assigned work, add department updates, update permitted lead status and record follow-up activi

Built-in visibility and accountability

- **Activity history** - Important lead actions such as assignments, updates and status changes are recorded for traceability.
- **Notifications** - Relevant users can see new activity in the CRM notification centre and may enable mobile browser notifications.
- **Role-based data scope** - Dealer, department and user permissions limit access to the right records.

Technology, in simple terms

The CRM uses a modern web architecture designed for secure access, reliable data handling and easy future enhancements.

- **Next.js and React** - The web application framework and user interface used to provide a fast, responsive CRM experience.
  - **TypeScript** - Adds safeguards to the application code, helping reduce errors as the CRM evolves.
    - **PostgreSQL with Supabase** - A managed cloud database that stores CRM users, leads, activities and notifications.
      - **Prisma** - Connects the application securely and consistently to the database.
        - **Vercel** - Hosts the live CRM securely over HTTPS and deploys updates from the project source code.
          - **OTP email authentication** - Uses email-based one-time passwords for secure, password-free sign-in.
            - **Real-time and mobile notifications** - Uses live updates, polling fallback and web-push capability to keep teams informed.

Value for the business

The CRM gives management a single view of enquiry handling, improves response time, clarifies ownership and provides a measurable lead-to-conversion process. Teams work from the same current information, while customers receive more consistent follow-up.

One workspace. Clear ownership. Better follow-up.
